**Subject:** Re: alarming sodium levels!

Hello -

I have forwarded your email to those EPA and ATSDR folks working on the Dimock site. I have not been involved in any of the activities since very early February so I am not up to date on any of the data and findings -

Thanks - Ann

**Subject:** alarming sodium levels!

I have reviewed over 600 pages of testing and am quite alarmed at the sodium levels, there are other concerns but I would like to focus on this. Do you have predrill info on those homes with high levels or levels over your flag of 20,000? Will there be an effort to find out where this salt water is coming from and whether it is brine, can you date it?? Will there be a map of the plume of contamination for folks to see? It appears there is salt to the left and salt to our right and here we are stuck in the middle with you...(I stole that from a song) I see glycols in some homes also. Arsenic...early 2008 I started to research gas extraction and had a list of items that could be involved with gas extraction..well now we have them in our water and it would be nice to have some answers. The Pandora box is open. Sincerely, [Ex. 6 - Personal Privacy]
